

4. Robustness Evaluation Summary

The submitted detector is the OpenCLIP ViT-H/14 spatial model. Protocol: official 15-condition grid on a 5,000-image WildFake val slice (50/50 real / AI). Acc / F1 use threshold 0.5. Robust is the mean of the 14 transformed conditions. Official = 0.50 x clean + 0.50 x robust.

Clean vs transformed

	AUC	AP	Acc	F1	EER
Clean	0.9966	0.9968	0.9392	0.9354	0.0298
Robust (14 transforms)	0.9882	0.9893	0.9238	0.9183	0.0579
Official	0.9924	0.9931	0.9315	0.9269	0.0438

AUC drops 0.0084 from clean to the mean of transformed images. Ranking (AUC / AP) stays high; Acc / F1 drop more because the 0.5 threshold is conservative (clean precision 0.997, recall 0.881).

Bar length is linear on [0.88, 1.00], the same window as the official-score chart.

Per transform (vs clean)

Each row is one official degradation, applied alone. Delta is versus clean AUC.

Condition	AUC	Delta vs clean	Acc
Clean	0.9966	--	0.9392
JPEG 90	0.9964	-0.0002	0.9356
JPEG 70	0.9955	-0.0011	0.9258
JPEG 50	0.9938	-0.0028	0.9306
JPEG 30	0.9902	-0.0064	0.9260
Blur 0.5	0.9958	-0.0008	0.9370
Blur 1.0	0.9871	-0.0095	0.9242
Blur 2.0	0.9766	-0.0200	0.9056
Resize 1/2	0.9939	-0.0027	0.9352
Resize 1/4	0.9871	-0.0095	0.9228
Noise 2%	0.9811	-0.0155	0.9186
Noise 5%	0.9816	-0.0150	0.9080
Noise 10% (worst)	0.9707	-0.0259	0.8998
Color	0.9938	-0.0028	0.9374
Crop 80%	0.9914	-0.0052	0.9264

Mild JPEG, light blur, color jitter, and 80% crop stay within ~0.005 AUC of clean. The grid is hardest on Gaussian noise and strong blur. No cell collapses: worst-condition AUC is 0.9707.
